

of the pollutant over the day.

d-The minimum daily effluent limitation is defined as the lowest allowable daily discharge concentration. The daily discharge means the discharge of a pollutant measured during a calendar day. For pollutants with limitations expressed in units of mass, the daily discharge is calculated as the total mass of the pollutant discharged over the day. For other units of measurement, the daily discharge is the average measurement of the pollutant over the day.

2. Final Limitations

All discharges and activities authorized by this permit shall be consistent with the terms and conditions of this permit. The discharge of any of the following pollutants more frequently than, or at a level in excess of, that identified and authorized by this permit shall constitute a violation of the terms and conditions of this permit.

Beginning on **April 16, 2007**, and lasting through **July 31, 2007**, the Permittee is authorized to discharge treated municipal wastewater at the permitted location subject to complying with the following limitations:

| EFFLUENT LIMITATIONS^a: OUTFALL # 001 | | |
|--|---|----------------------------------|
| Parameter | Average Monthly | Average Weekly |
| BOD ₅ ^b | 30 mg/L; 450 lbs/day | 30 mg/L; 675 lbs/day |
| TSS ^b | 30 mg/L; 450 lbs/day | 30 mg/L; 675 lbs/day |
| Fecal Coliform Bacteria | 100/100 MI | 200/100 mL |
| pH | Daily minimum is equal to or greater than 6 and the daily maximum is less than or equal to 9. | |
| Total Residual Chlorine | Not Applicable | Not Applicable |
| Total Ammonia, N (NH ₃ -N) | 1.1 mg/L; 16.5 lbs/day | Not Applicable |
| Parameter | Average Monthly | Minimum Daily^c |
| DO | Not Applicable | 4.0 mg/L |
| a-The average monthly and weekly effluent limitations are based on the arithmetic mean of the samples taken with the exception of fecal coliform, which is based on the geometric mean. | | |
| b-The average monthly effluent concentration for BOD ₅ and Total Suspended Solids shall not exceed 30 mg/L or 15 percent of the respective monthly average influent concentrations, whichever is more stringent. | | |
| c-The minimum daily effluent limitation is defined as the lowest allowable daily discharge concentration. The daily discharge means the discharge of a pollutant measured during a calendar day. For pollutants with limitations expressed in units of mass, the daily discharge is calculated as the total mass of the pollutant discharged over the day. For other units of measurement, the daily discharge is the average measurement of the pollutant over the day. | | |
